TransMedics®

Logan Kane | Curtis Beavers | Stellan Knopp

Company Overview

Overview

- TransMedics is a medical technology company revolutionizing organ transplant therapy by replacing outdated cold storage preservation technology with its proprietary Organ Care System (OCS)
- Only FDA-approved, portable, multi-organ, warm perfusion platform for both Donation After Brain Death (DBD) and Donation After Circulatory Death (DCD) organs
- Operates a National OCS Program (NOP), which is a vertically integrated end-to-end procurement and logistics service
- Acquired Summit Aviation and Northside Property Group in August 2023
- Headquartered in Andover, MA | Founded in 1998 | 898 Employees

Key Trading Metrics[1]

Ticker Symbol	$TMDX
Share Price	$109.36
Market Cap	$3.75bn

Thesis

A Mispriced Compounder

We believe that TransMedics is priced inefficiently, as the market follows management's conservative guidance, sees a delay risk in clinical trials, a misinterpretation of Kidney OCS potential, and an overlooked view of the demographic shift tailwinds from DBD to DCD donors

Conservative Guidance

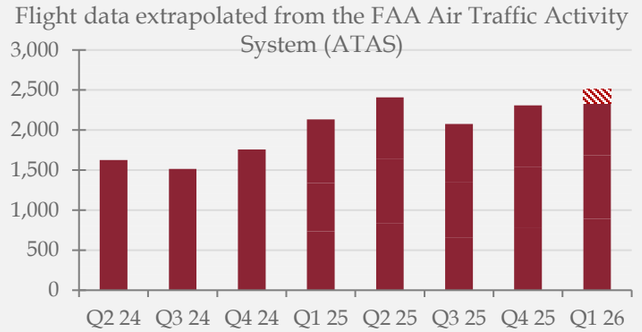

- Historically, TransMedics has been conservative with its growth outlook
- Since 2022, guidance has been 46% lower than actuals
- In 2025, management's mid-guidance was 23%, but ultimately finished the year at 37%
- For 2026, management has projected ~23% growth, supporting our confidence in a consecutive beat

TransMedics Positioning

- CEO Waleed Hassanein noted Static Cold Storage (SCS) competitors refused to entertain randomized testing against OCS, implying delayed trials
- Management has proposed a workaround with broader comparison
- Part A of ENHANCE Trial remains unaffected – refusal only affects the control arm of Part B OCS ENHANCE Heart Trial

Quarterly Flight Trends

Conservative Guidance → Concerns of Trial Delay

Market Underestimates Potential of OCS Kidney → Shift to DCD Donors Underappreciated

While the market remains focused on near-term trial delays and conservative guidance, FAA flight data shows otherwise; organ transport flights have reached all-time highs in Q1 2026, confirming procedure volume is accelerating independent of investor skepticism

National Library of Medicine | Singularity Research Fund – FAA Flight Data | TransMedics Group 2025 Q4 Earnings Call

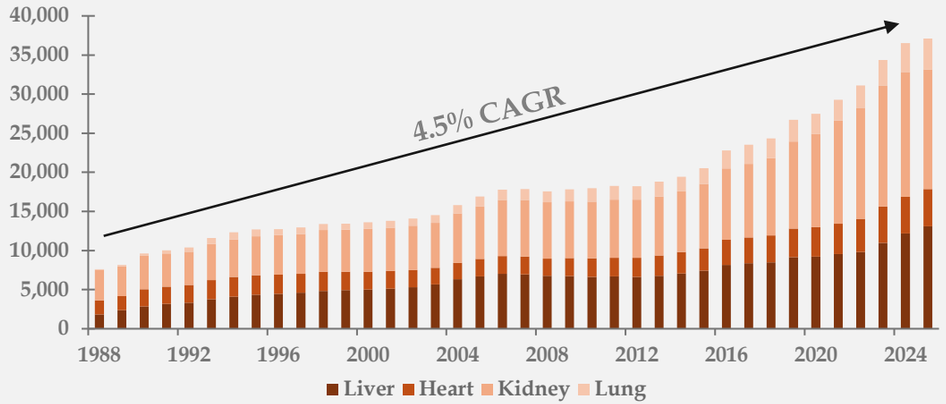

Industry Overview

Static Cold Storage (SCS)

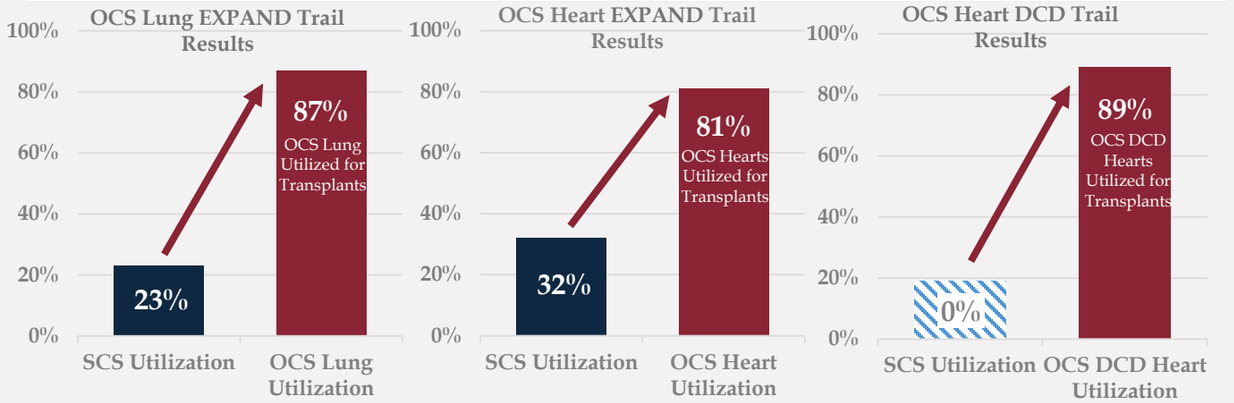

- Static cold storage is the former method of organ preservation
- Flushes the organ with a cold solution and stores it on ice while ex vivo
- Leads to severe organ damage (ischemia) risk after 4-6 hours, due to lack of oxygenated blood flow
- Only 2-3 out of 10 donated thoracic organs are usable for transplant
- No organ optimization or assessment capabilities possible
- 5.6x more likely to develop (PGD 2-3)[1] with extended cold time (>2h) (Lung)[2]
- 36% early mortality rate after heart transplants due to PGD (Heart)[2]

Deceased Donor Retrieved in U.S.

- Total: 4.5% CAGR (1988 - 2025)
- Liver: 5.7% CAGR (2014 - 2025)
- Kidney: 6.4% CAGR (2014 - 2025)

NMP (OCS) Impact on Donor Utilization

Normothermic Machine Perfusion (NMP)

- Next-generation method of organ preservation between procurement and implantation
- Preserves organs outside of the body by simulating physiological conditions
- Decreases risk of early allograft dysfunction, postreperfusion syndrome, ischemia injury, and ischemic biliary complications
- On-pump diagnostics monitor perfusion, trends, and viability
- 15x lower mortality rate post 1 year extended cold time (>2h) (Lung)[2]
- 2x reduction in EAD for DCD livers with NMP (22% vs 44% SCS)[3]

[1] *Primary Graft Dysfunction Grade 2-3 represents severe early lung transplant failure within 72 hours* | [2] *INSPIRE International Trial Results* | [3] *PubMed Normothermic Machine Perfusion of Donor Livers for Transplantation* | *TransMedics Group Investor Presentation*

Business Model

Organ Care System (OCS)

- The only fully portable, FDA-approved perfusion technology for DBD and DCD organs
- Hearts keep beating, lungs keep breathing, and livers continue making bile
- Monitors organ vitals and allows clinicians to adjust vitals, nutrients, and perfusion, which keeps donor organs warm, oxygenated, and functioning while ex vivo
- Reduces the number of unused organs, by addressing limitations of current SCS methods

Heart OCS

- **81% Utilization** of DBD hearts currently unused
- **65% Lower** severe post-transplant complications
- **95% Survival** after DCD donor heart transplants

Lung OCS

- **87% Utilization** of lungs currently unused from DBD and DCD donors
- **50% Reduction** of severe post-transplant complications

Liver OCS

- **2x Rate** of DCD donor liver utilization
- **43% lower** severe post-transplant complications
- **84% lower** long-term biliary complications

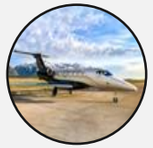

National OCS Program (NOP)

- The National OCS Program is an end-to-end service for organ procurement, preservation, and logistics of the Organ Care System

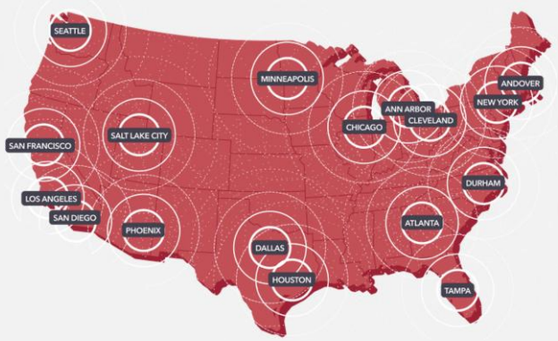

Nationwide network of clinical specialists
World-class surgical expertise and clinical donor organ management, mobilized on-demand from 17 strategically located NOP hubs across the U.S.

Acquisitions & Partnerships
In August 2023 TransMedics acquired private charter entity Summit to enable the use of aircraft transportation services. Then, a partnership with Mercedes-Benz was announced in 2025 as they prepare to launch Italian hubs.

Case Coordinators & Logistics Specialists
Seamlessly facilitating the coordination and communication of all case logistics from our 24/7-staffed NOP Logistics Command Center in Andover, MA.

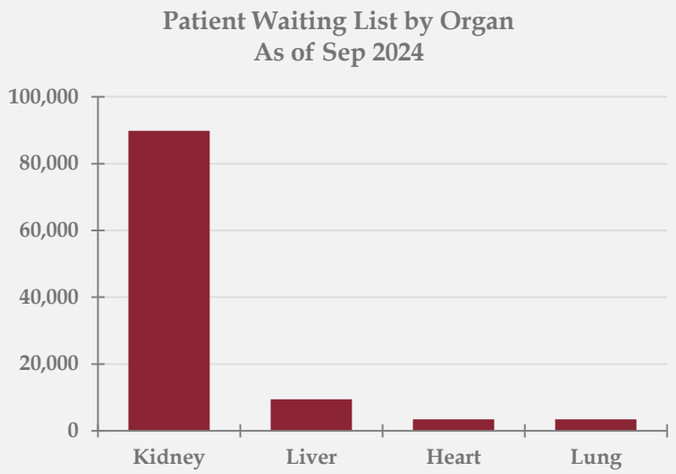

- 50+ Procurement Surgeons
- ~130+ Pilots
- 240+ OCS Clinical Specialists
- Dedicated Maintenance Hub
- 18 Hubs Across the US
- Logistics Command Center
- 22 Airplanes
- Digital Ecosystem

Growth Drivers

Kidney OCS

- The OCS Kidney program, anticipated to be the largest segment of TransMedics' business, is expected to launch by late 2028 or early 2029
- Delayed Graft Function (DGF) post-transplant kidney complication rate is at an all-time high of ~55%-60% compared to ~20%-25% in 1998
- Kidney utilization is at all time low of ~60% compared to ~90%-92% in 1990
- OCS Kidney aims to reduce DGF by ~50%

International Expansion

- Initiating 4 OCS Hubs In Italy: Milan, Rome, Padua, and Bari
- Mercedes-Benz partnership to deploy vehicle fleet across NOP hubs in Italy, supporting greater utilization
- Potentially double the total addressable market, as Europe represents 45% of global transplant numbers

OPTN Standardization

- TransMedics aims to become an integrated partner with the national transplant ecosystem
- Bipartisan effort by Congress, HRSA, and CMS to modernize the US transplant ecosystem, further expressing interest in becoming integrated
- Standardized oversight benefits TransMedics moat as the only NMP provider with 5 FDA approvals across 3 the heart, lung, and liver

2026
- Next-Gen OCS ENHANCE Heart & DENOVO Lung Programs
- Launching EU NOP Model

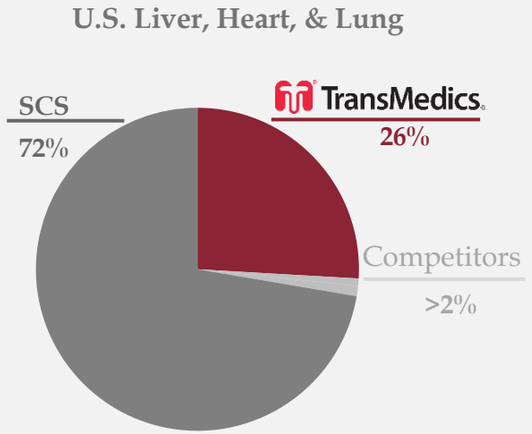

2027
- OCS Kidney Clinical Trial
- Expected FDA Approval of Next-Gen Heart & Lung Indications
- Expanding Intl. NOP

2028
- Introduction of Gen-3 OCS Liver, Heart, and Lung Technology
- Launch of International OCS Kidney
- Expected FDA Approval of OCS Kidney

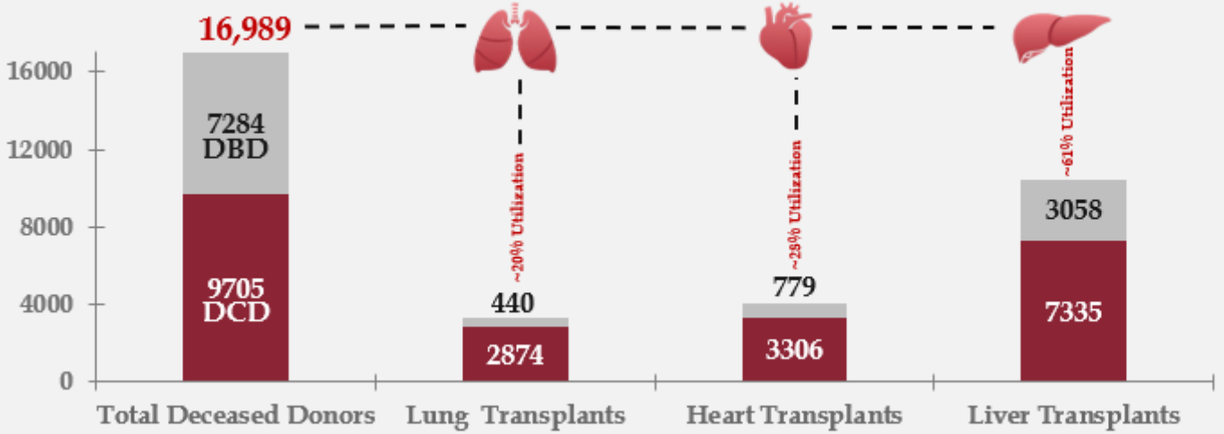

2029+

Addressable Market

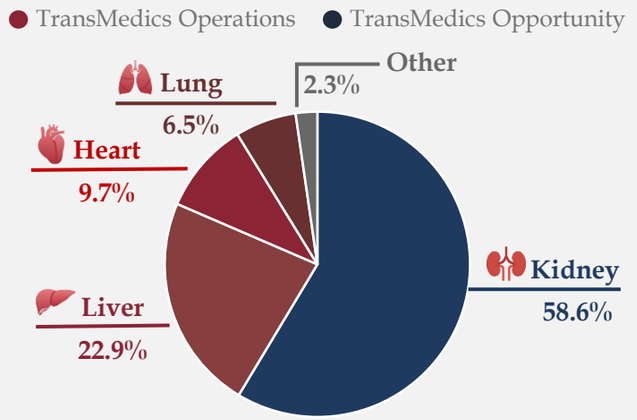

2025 Transplants by Method

Underutilization of U.S. Donor Organs

Transplant Volume by Organ

Commentary

- TransMedics OCS accounted for 26% of all U.S. liver, heart, and lung transplants in 2025, up from 20% in 2024
- ~72% of U.S. transplants still rely on cold storage, representing TMDX's conversion opportunity
- UK HealthCare uses Heart OCS for ***every*** heart transplant performed
- Management has strong guidance to administer 20,000 total annual transplants by 2030E
- Kidney represents 58.6% of total transplant volume, but is untapped by TransMedics

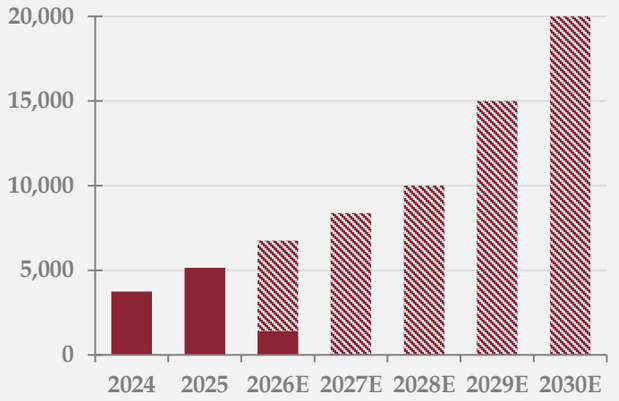

UK HealthCare — Mattias Loebe, M.D., Ph.D.

"NMP allows us to expand the donor pool and use DCD organs. Since UK HealthCare's adoption of the OCS, the heart donor pool has shifted, with 80% of cases being DCD, which was previously impossible."

- Cardiothoracic surgeon with 35+ years of experience in heart and lung transplantation; now leads a collaborative team at UK HealthCare, where OCS Lung and Heart are actively used

TransMedics Total Transplants[1]

UNOS National Transplant Data (2025) | TransMedics 2025 Q4 Earnings Call | UNOS National Data | TransMedics Group Investor Presentation | Self Conducted Interview With Dr. Loebe

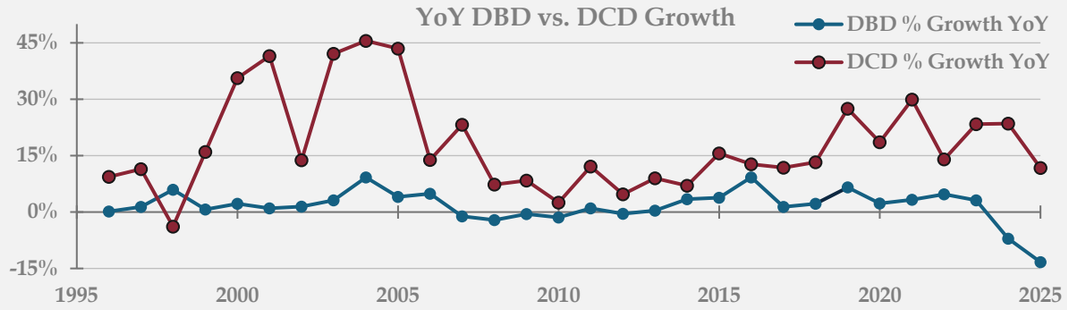

Shifting Donor Pool

DBD Organs

- Donation After Brain Death (DBD) donation growth has plateaued
- SCS was developed in an era with prominent focus on DBD donors
- Organ Care System is less necessary when dealing with DBD, as SCS is sufficient due to no time constraints prior to procurement
- ICU survival rates are improving, resulting in lower DBD donors
- 1.6% average annual DBD donation growth YoY since 2000

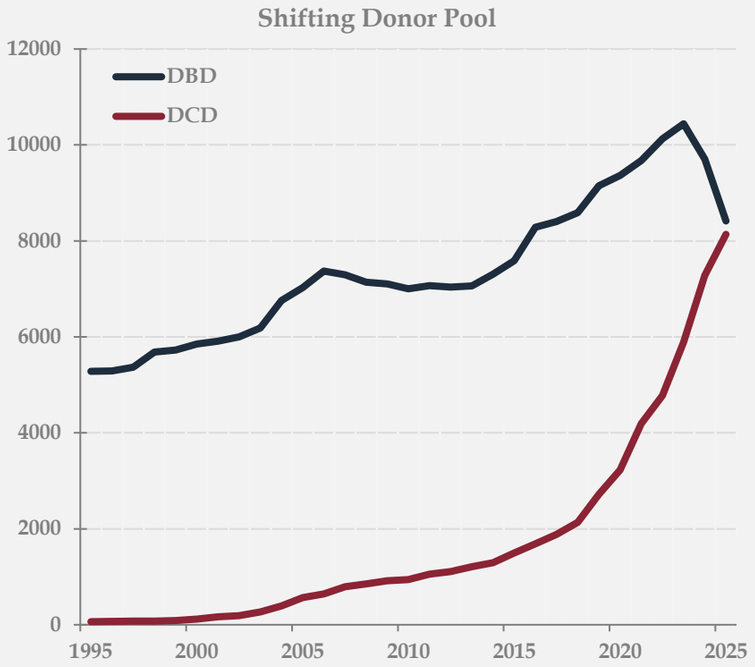

DCD Organs

- Donation After Circulatory Death (DCD) donation has grown ~5x over the last decade due to an aging population, increased chronic disease, and clinical acceptance expansion
- OCS was primarily developed with a focus on the DCD donor pool
- 19.7% average annual DCD donation growth YoY since 2000
- DCD donors now represent 49% of all Deceased Donors in the U.S.

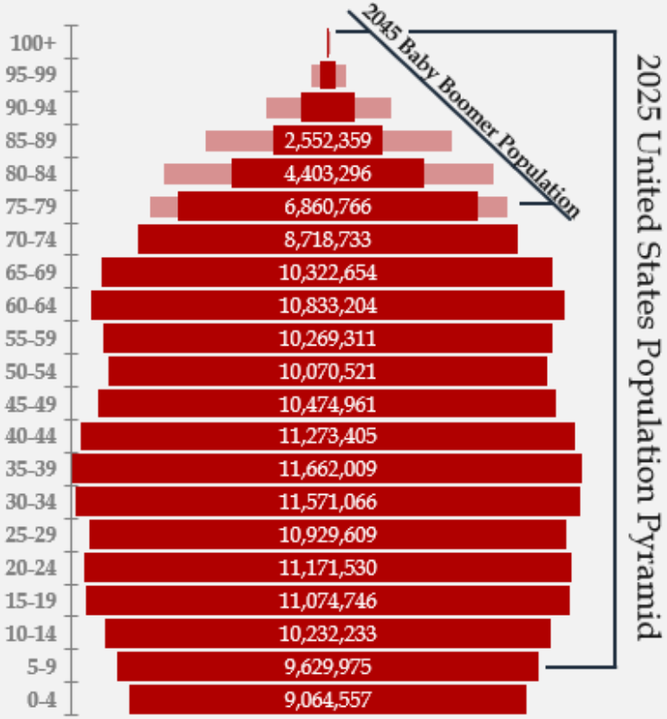

TransMedics Positioning

- **The donor pool is shifting toward DCD. TransMedics OCS isn't forcing itself into a market; the market is growing toward OCS**
- OCS is significantly more prominent within the DCD donor pool, as SCS fails to address warm ischemia complications

Demographic Tailwind

- The 75+ population grows 68% by 2045 from 15M to 26M Americans
- Baby Boomers represent the highest DCD risk demographic, expanding the DCD donor pool that OCS prioritizes

Competitive Landscape

Competitors

Company	Commercial Presence	Organ(s)	Tech	Revenue	EV/EBIT
TransMedics	USA, Netherlands, Germany, Australia	Lung, Heart, Liver, Kidney (dev.)	NMP[1]	$606mm FY2025	31.48x
XVIVO	USA, EU	Lung, Heart, Liver, Kidney	HMP & NMP[2]	~$83mm FY2025[3]	77.52x
OrganOx	USA, UK, EU, Australia, Canada	Liver	NMP	~$71mm FY2024	N/A
PARAGONIX	USA	Lung, Heart, Liver, Pancreas, Kidney	HMP & SCS	$43mm FY2023[4]	N/A
Organ Recovery Systems	USA + 43 countries	Kidney	HMP	N/A – private, undisclosed	N/A
BridgeToLife	USA, 50+ countries (solutions only)	Liver, Pancreas, Kidney	Solution & HMP	N/A – private, undisclosed	N/A

Commentary

- Public comps are scarce – four of five peers have been acquired or remain private, **making XVIVO Perfusion the only publicly traded comparable**
- TransMedics generates **more revenue than all direct peers combined**
- TransMedics is the **only company** in the comp set with a vertically integrated logistics network
- Acquisition activity across comps validates the strategic value of this technology – OrganOx **($1.5bn to Terumo**), Paragonix **($477mm to Getinge**), and an additional private acquisition (ORS by Genext) – while TransMedics remains the only independent, publicly traded, multi-organ NMP platform at scale
- **Competitive positioning is segment-specific**; TMDX dominates where donor-recipient logistics are complex (heart, lung, deceased-donor liver); SCS and HMP remain viable in same-hospital living-donor cases

TransMedics	Portability	XVIVO
Fully portable		Stationary hospital cart
Approved in 2018 – portable use	FDA Approval	Approved in 2019 – stationary use only
Standard and expanded criteria donors	Donor Scope	Marginal donors only
Mitigated – warm perfusion begins at procurement	Ischemia Risk	Present – cold storage used in transport
Integrated into NOP logistics	Transport Network	No integrated logistics; outsourced
$80,000 - $120,000	Cost Per Device[5]	$20,000 - $60,000

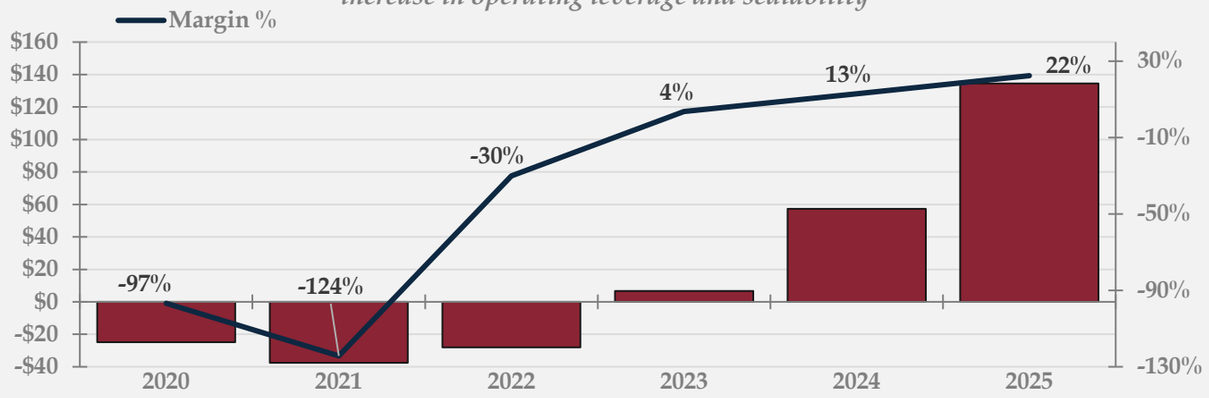

[1] *ONLY FDA-approved, portable, multi-organ, warm perfusion platform* | [2] *HMP/NMP when stationary; SCS when being transported* | [3] *Converted from SEK to USD* | [4] *Last publicly known revenue via Getinge's acquisition press release* | [5] *National Institute of Health Library*

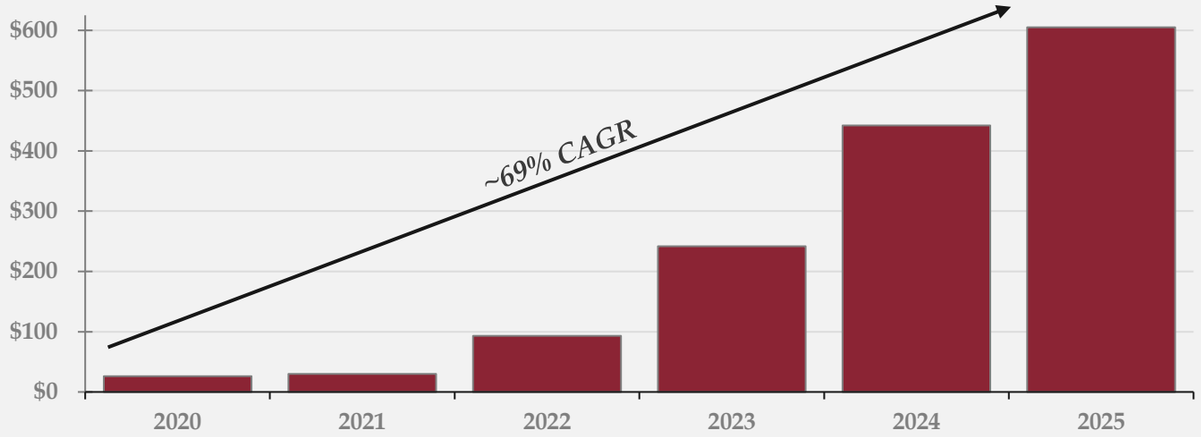

Financial Trends

Adj. EBITDA ($MM)

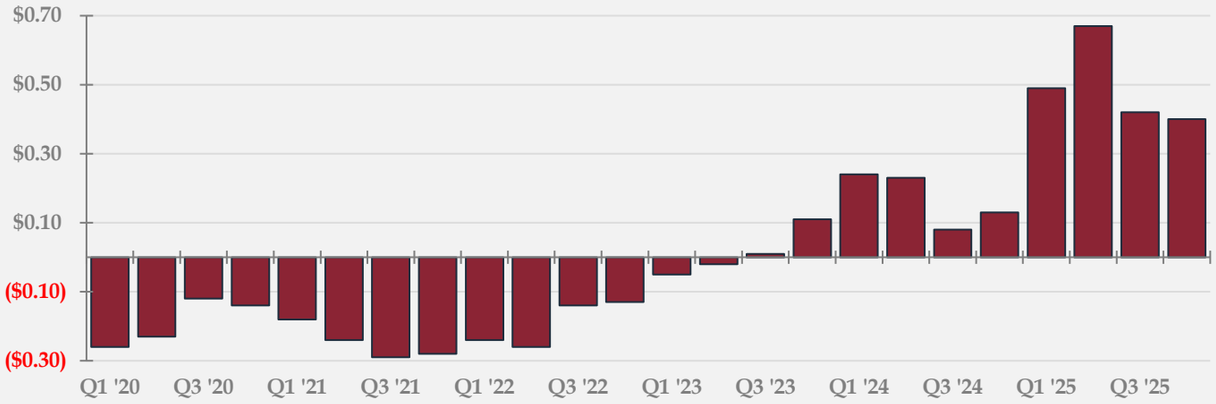

Recent transition into strong profitability with rapid margin growth reflects an increase in operating leverage and scalability

Revenue ($MM)

LFCF & Debt/Capital

LFCF growing and (D/C) falling FY23 – FY25 displays deleveraging while enhancing profitability conversion

Capital IQ | Company Filings | J.P. Morgan Equity Report

Share Price & Key Events

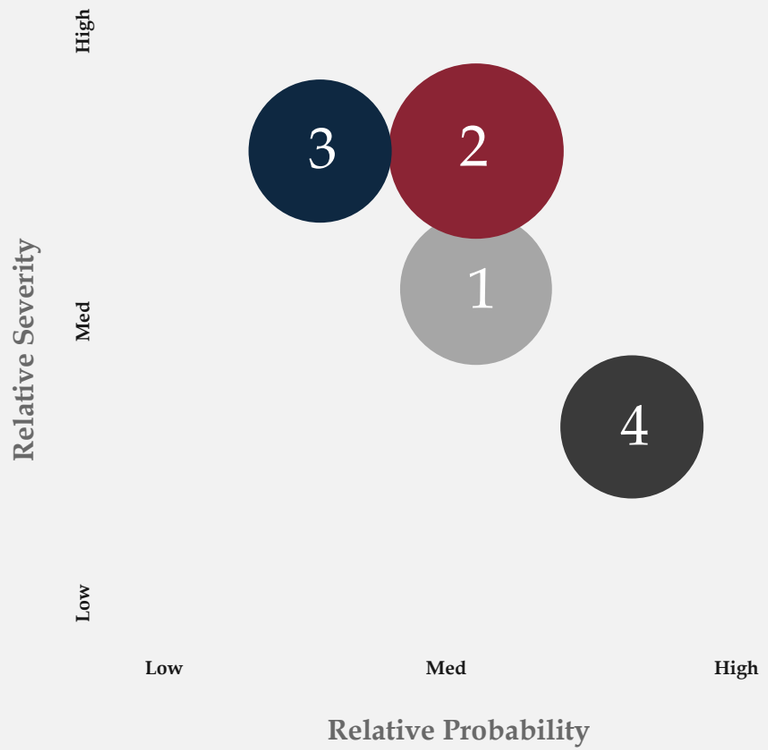

Commentary:

1. Summit Aviation acquisition; investors price in margin and OpEx pressure
2. Shares climbed sharply through mid-late 2024 as Summit Aviation acquisition scales NOP and clinical adoption accelerates
3. Decline caused by sector-wide med-tech selloff driven by higher rates and valuation multiples compressed
4. Volatility began as Scorpion Capital released a 340-page short report alleging fraud, malpractice, and other misconduct at TransMedics
5. TransMedics responds to inaccurate and misleading claims; price rises along with earnings beat for Q1 2025
6. Recent ~28% pullback since early March driven by brief delay in OCS Kidney trial

Risks & Mitigants

	Risk	Mitigation
1. OCS Kidney clinical trial execution	OCS Kidney approval timeline is subject to clinical trial execution risk and regulatory uncertainty	OCS Kidney development is advancing, with the design already presented publicly, devices expected by mid-2026, and clinical trials targeted for H12027, including potential parallel U.S. and international programs
2. International NOP scaling execution	Reliance on third-party transport providers could constrain NOP growth if availability tightens or costs rise	The strategic partnership with Mercedes-Benz strengthens four Italian NOP hubs and establishes a model for additional partners as the NOP expands internationally
3. OPTN/CMS policy reform	Federal reimbursement changes or HRSA's ongoing OPTN modernization could reduce demand for the OCS or create additional pricing pressure outside of management's control	Established private-payor coverage for OCS, stable CMS transplant reimbursement since 2007, and strong alignment with HRSA/OPTN goals support ongoing OCS demand even amid potential policy changes
4. Alternative Therapies & Competitor Risk	Advances in alternative therapies could reduce overall transplant volumes and shrink the OCS's TAM, while other competitors could develop superior or cheaper technology	The U.S. hit a record 49,000+ transplants in 2025 with the waitlist still growing, providing substantial runway from OCS penetration alone. TransMedics's NOP further strengthens its position by creating end-to-end switching costs no standalone device competitor can replicate

Recommendation:

Strong Buy

Base Case

- Target Price: $179.62
- 64% appreciation from the current share price
- ~15% higher than street consensus[1]

Assumptions

- Kidney OCS trial timeline matches management expectations
- NOP international expansion deploys on time
- Regulatory modernization of the U.S. transplant ecosystem accelerates NOP adoption
- Demographic shifts from DBD to DCD donors
- Financial performance outpaces market sentiment

Commentary

1. Revenue grew nearly 20x from $30.3M in 2021 to $605.5M in 2025, signaling rapid and successful commercialization
2. Gross margin declined steadily from 69.9% (2021) to 59.9% (2025), due to Summit Aviation acquisition
3. Operating income swung from $(39.4M) in 2021 to $108.6M in 2025, crossing positive for the first time in 2024
4. A $(82.8M) tax expense appears in 2025 due to DTA[1]
5. $25M net loss in 2023 to $190.3M in net income by 2025, shows a recent turn to profitability
